

VBus.net

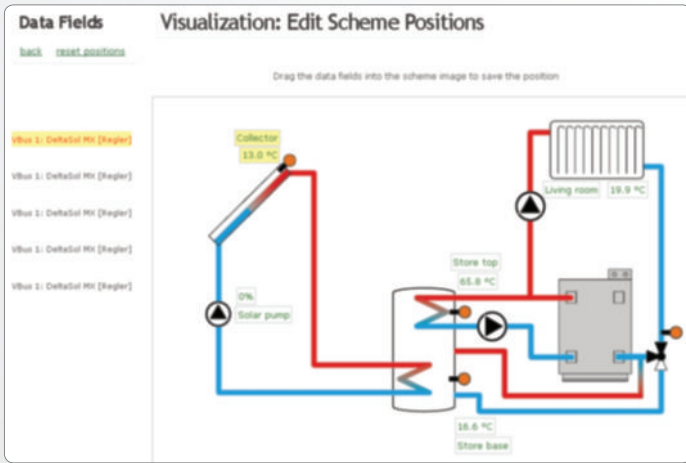

Internet access to your solar thermal and heating system
with just a few clicks

www.vbus.net

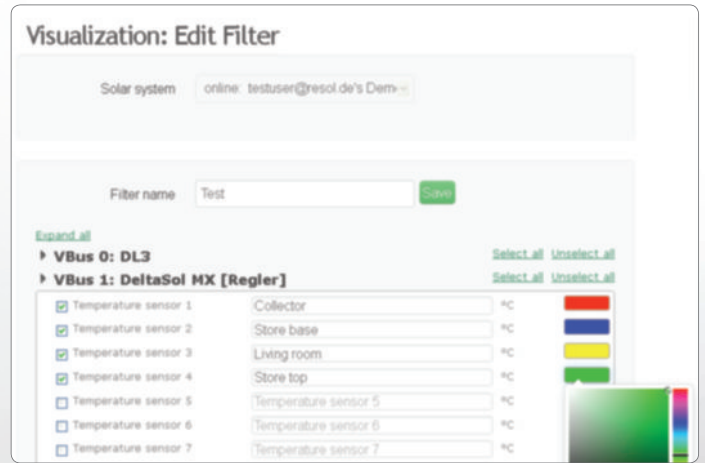

- ✓ Your solar thermal and heating system on the Internet – without any tedious router configuration
- ✓ Really easy with a DL2* or DL3 Datalogger
- ✓ Visualisation also for many mobile devices
- ✓ System access via the Web browser – no software installation required
- ✓ Data progress charts as live data displays or diagrams
- ✓ Optional publication of system data with only one click
- ✓ Personalised filters for customised data displays

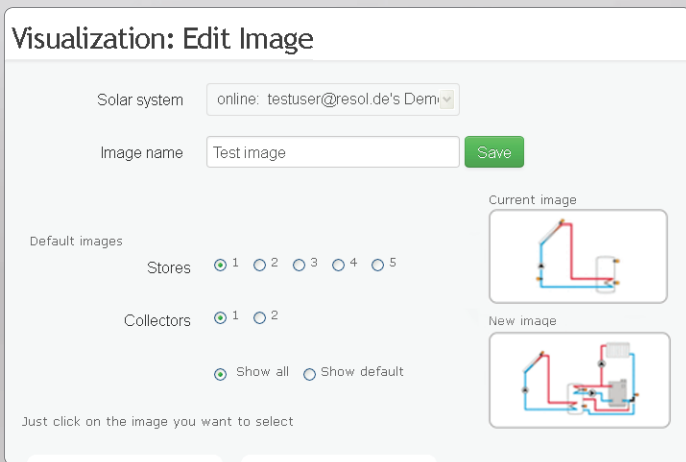

* For DL2 Dataloggers purchased in 2013, there will soon be a free-of-charge firmware upgrade available. For earlier product versions, the update will be available for a 20 euro fee.

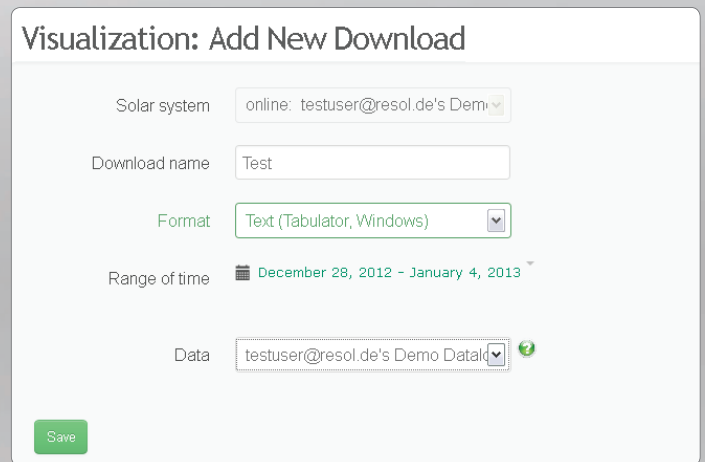

Live Schemes: Show your live data values in front of a schematic image of your solar system. Simply drag and drop the element to position it on the image on the right.

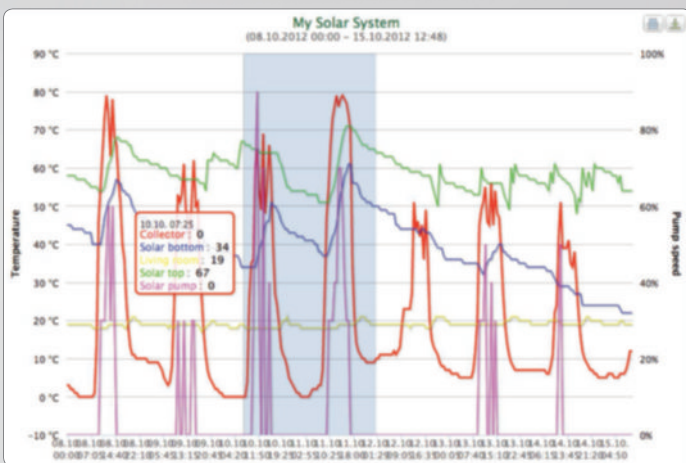

Filter: Create selections of your desired data points for further use in your downloads, live schemes and diagrams. Rename the default names and pick a custom colour for your diagram line.

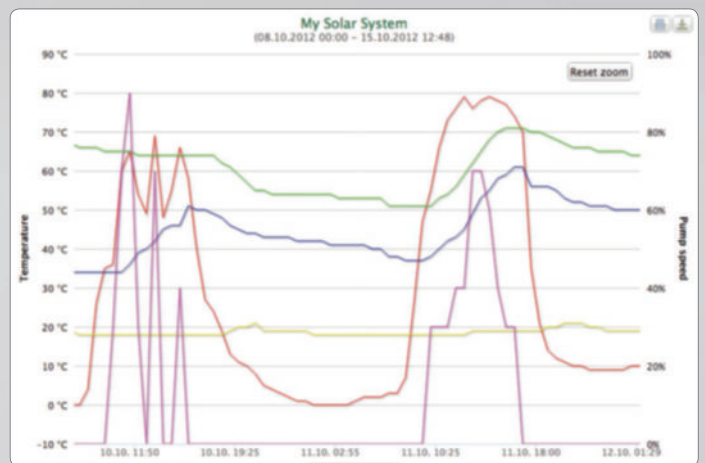

Images: Save scheme images of your solar system for further use in your live schemes. Choose an image from a selection of standard images or upload your own custom image.

Downloads: Download the stored data values of your solar system in different file types for a custom range of time.

Diagrams: Show your stored data values as a diagram for a custom range of time.

Zoom: Zoom in on a part of a diagram to take a closer look at the data progress.
